# Subject of Your Hot Topic

In Europe every chemical with more than 1 metric ton has to be registered and released until 2018.

Most chemicals were pre-registered but pre-registration will end June 2018.

Each producer or importer in Europe has to do the registration. One company may use the registration data of another company.

## Hot Topic Occurrence

Registration for e.g. SiF<sub>4</sub> is still pending.

One supplier wanted to take the lead but now seems to stop production/import of this molecule and will not register SiF<sub>4</sub>

Other molecules seem to be open, too.

# Impact of Your Hot Topic

If a chemical is not registered it will be not allowed to supply this chemical within Europe starting July 2018

## Resolution of Your Hot Topic

We asked supplier about the registration status and work. Urge them to register e. g. SiF4.

# Expectations for Your Hot Topic

Check the registration status of your chemicals in EU.
